1. Open Internet Explorer and enter https://vpn.scripps.org in the Address line as below.

![Internet Explorer with Google search](image)

2. Enter your CorpID and Password and click the **Sign In** button.

![Scripps SSL VPN](image)

3. An Information Bar alert will display at the top of the Internet Explorer window. Click anywhere on the bar and select **Install ActiveX Control...**

![Loading Components](image)

4. Click on the **Install** button when you receive this warning.
5. Click on the **Always** button you receive this warning.

![Image of Always button](image1.jpg)

6. The first time connecting you will receive the window below. Click the **Cancel** button. If you receive a second window similar to the image below click the **Cancel** button on it also.

![Image of Cancel button](image2.jpg)

Click on the **Unblock** button when you receive this Alert.

You are now logged in to the SSL VPN but as the image above indicates your computer must restart the computer to complete the configuration. Click the **Sign Out** button and restart your computer.

![Image of Sign Out button](image4.jpg)
7. After your computer restarts, follow steps 1 and 2. When you’ve logged in verify that the icon circled in the left image is in your System Tray. If it is not, scroll down SSL VPN Welcome page and click the Start button next to Windows Secure Application Manager as shown in the right image below.
